AI-POWERED ESG INTELLIGENCE PLATFORM

ESG EXEC AI

The intelligent platform for carbon tracking, ESG reporting and regulatory compliance.

Turning 40 hours of compliance work into 30 seconds of AI-powered insight.

$2M+
Annual fine exposure mitigated

97%
Executive ESG demand by 2026

3 Regs
Simultaneous compliance coverage

92%
AI analysis accuracy

The ESG Compliance Crisis Costs Enterprises Billions Every Year

40+ hrs/mo
Reporting Time Drain

Teams still spend 40+ hours every month gathering, validating, and reconciling ESG data across siloed systems.

$2M-$10M
Fine Exposure

CSRD, SEC climate disclosure, and California SB 253 stack disclosure, assurance, and enforcement risk.

35% Error Rate
Manual Calculation Risk

Spreadsheet-driven Scope 1, 2, and 3 calculations create avoidable audit failures and investor distrust.

3-5 Weeks
Board Report Bottleneck

Executive ESG summaries still require manual analyst coordination, narrative drafting, and formatting delay.

50,000+
Companies Under CSRD

The compliance wave is broad, global, and already active across the enterprise landscape.

No Visibility
Hidden Scope 3 Risk

Most companies still cannot see value-chain emissions where the largest share of total footprint lives.

97% of executives see ESG data integration as key to business growth by 2026 — yet most enterprises still rely on disconnected spreadsheets and manual workflows.

Three Regulations. One Convergence Deadline. Zero Room for Error.

EU MANDATE **CSRD**

EU Corporate Sustainability Reporting Directive

Deadline: 2024-2026 phased rollout
Scope: 50,000+ companies worldwide
Penalty: €50K-€500K per violation

Enterprise pain:
Manual workflows cannot reliably handle assurance readiness, double materiality, scenario analysis, and verified Scope 3 disclosure.

US FEDERAL **SEC**

Climate-Related Disclosure Rules

Deadline: 2025-2026 phased
Scope: All US public companies
Penalty: $1M-$5M+ enforcement risk

Enterprise pain:
Manual workflows cannot reliably handle assurance readiness, double materiality, scenario analysis, and verified Scope 3 disclosure.

STATE LAW **CA SB 253**

Climate Corporate Data Accountability Act

Deadline: First reports due 2026
Scope: $1B+ revenue in California
Penalty: $500K per year non-disclosure

Enterprise pain:
Manual workflows cannot reliably handle assurance readiness, double materiality, scenario analysis, and verified Scope 3 disclosure.

ESG EXEC AI

One intelligent platform. End-to-end carbon tracking, AI-generated compliance intelligence, and executive-grade reporting — from raw data to board decision in seconds.

WITHOUT ESG EXEC AI

- ✗ 40+ hrs/month on manual carbon data collection
- ✗ Spreadsheets break under regulatory complexity
- ✗ Scope 3 supplier data remains invisible
- ✗ Board reports take 3-5 weeks to prepare
- ✗ Compliance gaps discovered during audit
- ✗ Fine exposure compounds across frameworks

→

WITH ESG EXEC AI

- ✓ AI ingests and calculates emissions in real time
- ✓ CSRD, SEC, and CA rules unified in one dashboard
- ✓ Automated Scope 3 supplier pipeline with gap alerts
- ✓ Board report generated in roughly 30 seconds
- ✓ Predictive alerts flag risks months before deadlines
- ✓ Computer vision strengthens real-world evidence trails

Three Integrated Modules. One Platform.

C 01

AI Carbon Dashboard

Real-time emissions intelligence

→ Automated Scope 1, 2, and 3 calculation

→ Anomaly detection with root-cause alerts

→ Daily emissions heatmap and forecasting

→ Supplier Scope 3 verification visibility

Replaces weeks of analyst work with live AI monitoring

A 02

AI Executive Dashboard

Board-ready intelligence in roughly 30 seconds

→ One-click board report generation

→ Role-based executive and sustainability views

→ AI action plans from live compliance gaps

→ Historical analysis and benchmark insight

Turns board prep into an AI workflow

R 03

Risk Evaluator & Compliance Hub

Proactive regulatory risk prevention

→ Unified CSRD, SEC, and CA monitoring

→ Clickable gap analysis with legal context

→ Predictive risk flagging 3-6 months early

→ Financial exposure modeling by gap

Prevents multi-million-dollar fines through proactive monitoring

From Compliance Gap to Executable Action Plan in One Click.

The AI Executive does not just surface risk — it builds the project plan, assigns departments, forecasts budgets, and generates board-ready output.

AI Executive 8-step workflow

1. Detect compliance gaps from live data
2. Suggest project type and urgency
3. Run historical analysis on similar cases
4. Generate action plan across 8 dimensions
5. Auto-delegate tasks to departments
6. Forecast budget and timeline
7. Predict ESG impact of each initiative
8. Generate board presentation and audit trail

AI ACTION ENGINE CAPABILITIES

Contextual intelligence
Reads live ESG data and identifies improvement opportunities.

Instant project plans
Creates realistic multi-team action plans from risk signals.

Budget forecasting
Predicts project cost and ROI before commitment.

Board report automation
Generates executive-grade output with one click.

Predictive risk alerts
Flags likely failures months before deadlines.

The Only Platform That Makes Scope 3 Fully Transparent.

1 SCOPE 1

AVG 15%

Direct Emissions

THE PAIN:

Equipment, vehicles, and on-site combustion remain fragmented in facility data silos.

AI SOLUTION:

Automated facility ingestion with anomaly detection flags sudden spikes and under-reporting.

2 SCOPE 2

AVG 12%

Purchased Energy

THE PAIN:

Energy purchases often sit in procurement systems disconnected from reporting workflows.

AI SOLUTION:

Direct utility and ERP integration supports market-based and location-based methods.

3 SCOPE 3

AVG 73%

Value Chain — 70–80% of footprint

THE PAIN:

The hardest category: supplier activity, logistics, travel, and product use with near-zero visibility.

AI SOLUTION:

AI estimates missing supplier data, tracks verification status, and flags follow-up priorities.

From Reactive Audit Failures to Proactive Risk Prevention.

2025-2026

CSRD (EU)

Scope 1 & 2 Data Quality	✓ Compliant
Governance Structure	⚠ Action Needed
Scope 3 Supplier Verification	✗ Critical Gap

US REQUIRED

SEC Climate Disclosure

Governance Disclosure	✓ Compliant
Risk Management Processes	⚠ Action Needed
Scenario Analysis	✗ Critical Gap

2026 DEADLINE

California SB 253

Scope 1 & 2 Reporting	✓ Compliant
Public Disclosure Requirements	⚠ Action Needed
Third-Party Verification	✗ Critical Gap

Every status card expands into evidence, legal context, and remediation guidance for assurance-ready execution.

AI Computer Vision + Autonomous Agents: The New Era of ESG Transparency & Accountability.

For the first time, ESG data is not just reported — it is seen, verified, and independently confirmed by AI in real time.

THE ACCOUNTABILITY GAP

Until now, ESG data has been largely self-reported. Companies entered emissions figures into spreadsheets without independent verification of underlying physical reality.

This creates greenwashing risk, investor distrust, regulatory exposure, and restatement liability.

The result: ESG-labelled capital without a durable mechanism to verify the claims behind it.

V CV-01

Computer Vision Emissions Verification

AI analyzes satellite imagery, facility camera feeds, and drone footage to verify reported emissions against observed activity.

A CV-02

Autonomous ESG Data Agents

Persistent agents monitor supply chain partners, public data sources, and regulatory signals continuously.

T CV-03

Tamper-Resistant Audit Evidence

Every verified data point is timestamped, source-attributed, and logged into an immutable evidence chain.

X CV-04

Multi-Source Agent Triangulation

AI cross-references reports against energy, logistics, and supplier signals to flag discrepancies.

The first AI platform to move ESG beyond self-reported data and into independent, vision-verified evidence.

A $50B+ Market With No Dominant AI-First ESG Platform.

Market breakdown

TAM — Total Addressable Market **$50B+**

SAM — Serviceable Addressable Market **$12B**

SOM — Obtainable Market (Yr 3) **$850M**

Investor lens

→ Regulatory timing compresses demand

→ Clear ACV expansion path across enterprise tiers

→ Cross-module upsell increases platform stickiness

→ No dominant AI-first ESG category leader yet

Why ESG EXEC AI Wins.

Capability	ESG EXEC AI	Point Solutions	Traditional GRC	Manual Process
AI-generated insights	✓ Real-time contextual AI	✗ Static analytics only	✗ No AI layer	✗ Manual interpretation
Unified 3-reg compliance	✓ Single platform	✗ Single framework	⚠ Partial coverage	✗ Manual cross-reference
Board report generation	✓ Roughly 30 sec output	✗ Export only	⚠ Template export	✗ Weeks of prep
AI Executive plans	✓ Autonomous workflow	✗ Not available	✗ Not available	✗ Consultant required
Scope 3 automation	✓ Gap detection	⚠ CSV import	✗ No supply chain depth	✗ Zero visibility
Vision verification	✓ Built in	✗ None	✗ None	✗ None
Autonomous agents	✓ Persistent monitoring	✗ None	✗ None	✗ None
Predictive risk alerts	✓ 3-6 months early	✗ Historical only	⚠ Rule alerts	✗ Audit discovery

First-mover moat: computer vision verification and autonomous agents are not available in competing ESG platforms.

Strong Unit Economics with Enterprise-Grade Retention.

CUSTOMER VALUE DELIVERED PER ENTERPRISE

Value driver	Annual value
Analyst hours saved	$76,800
Fine avoidance	$200K-$2M
Consultant elimination	$150K-$400K
Board prep savings	$32,000+
Audit acceleration	$50K-$100K
Vision verification replaces field audits	$80K-$250K
Conservative annual customer ROI	**$500K-$2.6M+**

Essential — $48K/yr

Up to 500 employees
Core dashboard + compliance monitor

Professional — $120K/yr

Up to 5,000 employees
AI Executive + full reporting suite

Enterprise — $300K+/yr

Unlimited scale
All modules + API + CV + agents

Target gross retention >97% · Net revenue retention >120%

Built. Demonstrated. Market-Ready.

P — Live functional prototype

The platform is operational with interactive compliance states and live AI output patterns.

A — AI Executive fully functional

The action engine, project initialization flow, and board report generator are demonstrable.

V — Computer vision engine live

Vision and agent infrastructure is operational with cross-referenced evidence logging.

T — Real-time emissions intelligence

Scope 1, 2, and 3 dashboards, trend lines, heatmaps, and anomaly alerts are functional.

Validated architecture. No legacy code. No tech debt. Designed around regulatory convergence and enterprise buyer urgency.

Three-Phase Market Entry Built for Enterprise Scale.

Phase 1 | Months 1-6

Seed & Validate

→ 5 design partner enterprises

→ Direct outreach to VP Sustainability and CFO

→ Content around regulatory urgency

Target: 5 paying pilots

GTM investment: $400K

Phase 2 | Months 7-18

Scale & Partner

→ Accounting and assurance partners

→ Integrations: Salesforce, SAP, Oracle

→ Conference and ecosystem visibility

Target: 50 enterprise accounts

GTM investment: $1.8M

Phase 3 | Months 19-36

Dominate & Expand

→ Channel network expansion

→ EU rollout under CSRD pressure

→ API marketplace distribution

Target: 300+ accounts

GTM investment: $5M+

Seed Round: $3M

To scale from validated prototype to category-defining enterprise platform.

Product & Engineering

40%
$1.2M

AI models, CV pipeline, agents, integrations, and enterprise security.

Sales & GTM

25%
$750K

Enterprise sales hires, pilot program, partnerships, and market presence.

Customer Success

20%
$600K

Implementation, onboarding, and enterprise support.

Operations & Legal

15%
$450K

SOC 2, GDPR, IP protection, and executive expansion.

18-month milestones: 50 enterprise accounts · $6M ARR · SOC 2 certified · Series A ready

INVESTOR OPPORTUNITY · SEED ROUND

ESG Compliance is the Defining Enterprise Challenge of 2025–2030.

ESG EXEC AI is the only AI-first platform unifying carbon tracking, regulatory compliance, computer vision verification, and autonomous agent intelligence — purpose-built for the convergence of CSRD, SEC, and California mandates.

Why This Deck Matters to Investors

Category timing	Three regulatory frameworks are converging into one enterprise buying cycle.
Differentiated product	This is not just carbon accounting — it is AI execution, verification, and compliance intelligence.
Enterprise economics	High-ACV SaaS with clear ROI and retention logic.
Defensible moat	Computer vision verification and autonomous agents create structural differentiation.
Platform leverage	The architecture supports modular upsell, embedded distribution, and board-level stickiness.

ESG EXEC AI is positioned at the intersection of regulatory urgency, executive workflow automation, and defensible verification infrastructure.
